SLANT RIDGE NOTCHED TROWELS

- The slanted and rounded notch provide the following advantages:
 - maximum coverage: when placing the tile on adhesive spread with a slanted ridge, the ridges overlap and collapse to provide superior adhesive coverage and consequently avoid any air pocket under the tile/slab;
 - no air pocket under the tile/slab means avoid water infiltration in case of outdoor floors or swim-ming pools. Also, in case of thin slabs (3-7 mm thickness), it avoids any breakages

- caused by concentrated loads;
- the absence of air under the tile improves the transmission of heat in case of underfloor heating;
- the rounded shape of the notch reduces the chance of the adhesive "binding" and ripping away the ridges while troweling. The adhesive does not bind in the rounded corners of this notch so the adhesive ridges stay intact.
- Rubber handle mounted on a die-cast aluminum core.
- Stainless steel, 100% rust-proof.
